

iFrame [EN] | Web Integration

How it works

[Here](#) you can find our Tool for iFrame embeds.

With the iFrame integration, parameters are given in the URL of the “src” tag. These parameters can be used to set customized settings for the tour.

If a parameter is not specified, a standard value is used, which is different in each tour.

The URL parameters are case-sensitive!

Example: <https://bregenzsommer.360ty.cloud/?Pano=node15&PanoFovStart=18&PanoTiltStart=-13&PanoPanStart=53&PanoPanTarget=-8&PanoTiltTarget=-13&PanoFovTarget=52&MoveSpeed=2.5&MoveDelay=1500&MoveLock=Mousewheel>

After the URI (here "https://bregenzsommer.360ty.cloud/") follows a "?". After the "?" the parameters are read. Then the parameters can be used. The parameters are divided by an "&" and the values are assigned with an "=".

URL Parameter

Position

Pano=node[number] -> set start-node

PanoFovTarget=[number(0 - 100 in °)] -> FOV value of the start node or target FOV position of the fly-in movement

PanoTiltTarget = [number(-90 - 90 in °)] -> Tilt value of the start node or vertical target position of the fly-in movement

PanoPanTarget=[number(-360 - 360 in °)] -> Pan value of the start node or horizontal target position of the fly-in movement

Fly-in

AutoMove -> Activates the movement / fly-in

PanoFovStart=[number(0 - 100 in °)] -> FOV value of the start position of the Fly-in

PanoTiltStart=[number(-90 - 90 in °)] -> Tilt value of the target position of the fly-in

PanoPanStart=[number(-360 - 360 in °)] -> Pan value of the target position of the fly-in

MoveLock=[All,Mousewheel,Mouse,Keyboard,Keyboard_Mousewheel]

-> prevents interactions with the tour during the fly-in motion, by the specified type
MoveDelay=[number in ms] -> starts the fly-in according to the specified value in milliseconds. Default 500

MoveSpeed=[number] -> multiplies the standard speed with the specified value

Hotspots

SingleImage -> hides hotspots

Example

```
<iframe src=`https://bregenzsommer.360ty.cloud/?Pano=node15
    &PanoFovStart=18&PanoTiltStart=-13&PanoPanStart=53&PanoPanTarget=-8
    &PanoTiltTarget=-
13&PanoFovTarget=52&MoveSpeed=2.5&MoveDelay=1500&MoveLock=Mousewheel`
    style = "height: 40vh; width: 100%">
</iframe>
```
